

NUCLEAR ENERGY: SUSTAINABLE AND SECURE?

THE C-10 FOUNDATION invites the public
to a presentation and discussion on **nuclear power today,**
climate change and energy security.

With growing concern over global warming, energy costs and geo-political instability, there has been a resurgence of interest in nuclear power to meet our energy demands.

CHRIS NORD, Vice President of Citizens Awareness Network and board member of C-10, is a local expert on the nuclear power industry and Seabrook nuclear power plant.

- *Should nuclear be part of the solution?*
- *How does it stack up in terms economics vs. other options, say efficiency or renewable energy?*
- *Have health and safety concerns been addressed adequately?*
- *What about storage and transportation of spent fuel?*

7:00 PM Thursday, April 17, 2008

Mass Audubon Center
Joppa Flats, Plum Island Turnpike

All are encouraged to attend this free event, which is being held as part of local Earth Week celebrations. **For more information, visit www.c-10.org**
